On hot days, heat is conducted into your home through the roof, walls, and windows. Heat-reflecting roofs, insulation, and energy efficient windows will help to reduce that heat conduction. Radiation is heat traveling in the form of visible and non-visible light. Sunlight is an obvious source of heat for homes.

Ductless heating and cooling systems are often installed in new home additions to extend comfort and temperature control where the main HVAC doesn't go. This technology also works for detached buildings, such as for she shed heating and cooling. One major plus to ductless heating and cooling is that these systems do not require ductwork – a big bonus

Passive cooling is a building design approach that focuses on heat gain control and heat dissipation in a building in order to improve the indoor thermal comfort with low or no energy consumption. This approach works either by preventing heat from entering the interior or by removing heat from the building. Natural cooling utilizes on-site energy,
