University of Cambridge 1. 5 Path coupling 33 ... A Markov chain is called aperiodic, if for all $x \in E$ have $\sum_{n \geq 0} P^n(x, x) > 0$. Let E be a countable (in finite or infinite) state space and let ν be a probability distribution on E . We call ν an invariant distribution if $\nu P = \nu$.

Markov Chains University Of Cambridge

Markov chains are the simplest mathematical models for random phenomena evolving in time. Their simple structure makes it possible to say a great deal about their behaviour. At the same time, the class of Markov chains is rich enough to serve in many applications. This makes Markov chains the first and most important examples of random processes.
