Gas Turbine vs Steam Turbine. Turbines are a class of turbo machinery used to

## Read Book Steam And Gas Turbine By R Yadav

convert the energy in a flowing fluid into mechanical energy by the use of rotor mechanisms. Turbines, in general, convert either thermal or kinetic energy of the fluid into work. Gas turbines and steam turbines are thermal turbo machinery, where the work is generated from the enthalpy change of the working fluid; i.e.

Steam Turbines. Over the last 100 years, GE has manufactured and installed a worldwide fleet of steam turbines. Our steam turbines equip 41% of the world's combined-cycle plants, 30% of fossil power plants, and 50% of the world's nuclear power plants. Our steam turbine portfolio spans across all fuels, from gas and coal to nuclear applications - from

combination with a steam turbine—in a combined-cycle power plant—to create power extremely efficiently. Air-fuel mixture ignites. The gas turbine compresses air and mixes it with fuel that is then burned at extremely high temperatures, creating a hot gas. Hot gas spins turbine blades.
