This topology is called
the countable
complement topology.
Lemma 3. The compact
subspaces of X are
exactly the finite
subspaces. Proof.

Suppose A is infinite.

Let $B = \{b_1, b_2, \dots\}$ be
a countable subset of
 A . Set $A_n = (X - B) \cup \{b_1, \dots, b_n\}$. Note that $\{A_n\}$ is an open covering
of A with no finite
subcovering.

4 Product Topology Let $\{X_i\}_{i \in I}$ be an indexed family of topological spaces and let $X = \prod_{i \in I} X_i$ be their product. The product topology on X is the topology generated by the basis consisting of sets of the form $\prod_{i \in I} U_i$ where each U_i is an open subset (or, equivalently, a basis element) of X_i and all but finitely many U_i are equal to X_i .

Munkres §32 Ex. 32.1.

Let Y be a closed subspace of the normal space X . Then Y is Hausdorff [Thm 17.11].

Let A and B be disjoint closed subspaces of Y .

Since A and B are closed also in X , they can be separated in X by disjoint open sets U and V . Then $Y \cap U$ and $V \cap Y$ are open sets in
