Article: Guest Column: Towards the Next Orbit; Challenges ...

The next planet, Neptune, was discovered in 1841 independently by English astronomer John Couch Adams and French astronomer Urbain Leverrier. The existence of Neptune, however, was not able to totally explain Uranus's orbital disturbances. Neptune showed movement away from its predicted orbit, as well. The search for Planet X continued.

Nibiru Update 2020 | Planet X

In physics, an orbit is the gravitationally curved trajectory of an object, such as the trajectory of a planet around a star or a natural satellite around a planet. Normally, orbit refers to a regularly repeating trajectory, although it may also refer to a non-repeating trajectory. To a close approximation, planets and satellites follow elliptic orbits, with the center of mass being orbited at
