Wolves prey on ungulates year-round, and because bears readily displace wolves from their kills, bears may find more ungulate carcasses during a larger portion of the year. This would provide bears a more reliable source of useful nutrients from July through October.

Potential Interactions Between Bears & Wolves ...

Bland was out on a safari in Yellowstone where she filmed what she called “the most epic bear-wolf interaction [she’s] ever seen.” It is magnificent footage and we can’t help root for the mama grizzly bear as the pack of wolves seem intent making one of her cubs their prey. Thankfully, the grizzly won and her cubs were safe. As a nice ...

large predators and their prey in Alaska are complex, and no one model fits all situations. It is possible to generalize about some situations, particularly in Interior Alaska. This information on the biology of moose, bears, and wolves, represents highlights from 25 years of research and management programs conducted by universities and state, provincial and federal governments in Alaska and Canada.

Predator/Prey Relationships, Alaska Department of Fish and ...

With fewer deer to target, wolves are eating bears. In Minnesota, I have seen active bear baits go completely dead when wolves move into the area. Wolves will eat some types of bear bait, but that's not the real reason they hang around. Wolves eat bears.

Do wolves eat bears? | Grand View Outdoors

Wolves prey primarily on large, hooved mammals called ungulates. For example: In Michigan, Wisconsin and Minnesota, the white-tailed deer is the wolf's primary prey, with moose, beaver, snowshoe hare and other small mammals also being taken. Elsewhere, wolves prey on caribou, musk-oxen, bison, Dall sheep, elk and mountain goats.

Hunting & Feeding Behavior | International Wolf Center

In other words, wolves are spoilt for choice when it comes to prey but are rarely preyed upon. First, here's the quick answer, then we'll look into it in a bit more detail. What Eats a Wolf? Despite being Apex predators, there are animals that eat wolves. These include grizzly bears, polar bears, Siberian tigers, scavengers, and of course, humans.
