There are many such hashing algorithms which can prove really effective for password security e.g. PBKDF2, bcrypt and crypt algorithms. Never expose information on URLs. Usernames, passwords, session tokens, and API keys should not appear in the URL, as this can be captured in web server logs, which makes them easily exploitable.

## **REST API Security Essentials - REST API Tutorial**

Cyber security is one of the most prominent and pressing concerns for businesses today. The 2017 Equifax breach was one wake up call, costing more than \$400 million and endangering the data of roughly 147 million people, all due in large part to poor API security. This has encouraged many to put a stronger focus on securing their APIs from such vulnerabilities.
