This is motivated by the observation that in the case of nested focal sets in the Dempster-Sbafer theory, possibility measure coincides with plausibility measure.

In mathematics, fuzzy sets (a.k.a. uncertain sets) are somewhat like sets whose elements have degrees of membership. Fuzzy sets were introduced independently by Lotfi A. Zadeh and Dieter Klaua [] in 1965 as an extension of the classical notion of set.

Characteristics of Fuzzy Logic. It is used for supporting the minimization of the logics created with the aid of the human. It is the easiest technique for locating the answer of these problems which are suitable for approximate or unsure reasoning. In Fuzzy logic , everything may additionally be a matter of degree.
