Linux is an operating system based on UNIX and was first introduced by Linus Torvalds. It is based on the Linux Kernel and can run on different hardware platforms manufactured by Intel, MIPS, HP, IBM, SPARC, and Motorola. Another popular element in Linux is its mascot, a penguin figure named Tux. 2) What is the difference between UNIX and LINUX?

### Top 60 Linux Interview Questions & Answers

The work queues have been introduced in Linux 2.6 and replace a similar construct called “task queue” used in Linux 2.4. They allow kernel functions to be activated (much like deferrable functions) and later executed by special kernel threads called worker threads.. Despite their similarities, deferrable functions and work queues are quite different.

Ok, I'll help you along, but you're going to have to do the work so you'll learn. "Kernel 2.4.20-6 on an i686" For starters, this phrase obviously has 2 important parts "Kernel 2.4.20-6" and "on an i686" Since numbers get confusing, lets start with the word "Kernel" - What is a Kernel (and don't say popcorn!)
